

# GHS CLASSIFICATION

## Introduction

In this module, you will find out the background to the international system, looking briefly at the relevant legislation and the transitional arrangements which are in place. You will learn about your duties under GHS. How hazards are classified under GHS and see examples of GHS pictograms.

Finally, you'll examine the requirements when communicating hazards and also find out about the new hazard and precautionary statements.

## Course Overview

At the end of the course, trainees will be able to:

- » State what the GHS Classification is and its background
- » Recognise the benefits of GHS and its legislation
- » Outline your main duties in relation to GHS
- » Identify how hazards are classified and communicated
- » Distinguish between the GHS hazard classification categories
- » Recognise the new GHS hazard pictograms and hazard statements
- » State what information must be provided on labels and packaging.

## Course chapters
